

Description:

The 2700-600 Power-Off Monitor Kit allows an iCUBE system to sense an AC power outage. The kit consists of a 24 VDC wall transformer and a DIN mount relay. A set of relay contacts are wired to any available Alarm Input on the iCUBE. The selected input function must be setup as “Power Off” in the iCUBE’s configuration menu. Loss of VAC power will open the contact closure at the input and the iCUBE will generate a Power Off alarm.

General Specifications

Temperature Range	-30°C to +70°C
AC/DC Converter	Input 85-264VAC, Output 24VDC @ 750mA
Relay	24VDC 4PDT Relay with Bifurcated Contacts
Weight	0.75 lbs
